DETAILED ACTION

Election/Restrictions

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1-17, drawn to a method of making a preform packaged fuel cell, classified in class 429, subclass 34.
- II. Claims 18-32, drawn to a fuel cell package, classified in class 429, subclass 38.

The inventions are distinct, each from the other because of the following reasons:

Inventions I and II are related as process of making and product made. The inventions are distinct if either or both of the following can be shown: (1) that the process as claimed can be used to make other and materially different product or (2) that the product as claimed can be made by another and materially different process (MPEP § 806.05(f)). In the instant case, the fuel cell package may be made by a materially different process including: bonding a first patterned layer to a second patterned layer; and assembling a solid oxide fuel cell including the first patterned layer and the second patterned layer.

During a telephone conversation with Ann Lee on June 14, 2004 a provisional election was made without traverse to prosecute the invention of claims 1-17. Affirmation of this election must be made by applicant in replying to this Office action. Claims 18-32 are withdrawn from further consideration by the examiner, 37 CFR 1.142(b), as being drawn to a non-elected invention.

EXAMINER'S AMENDMENT

An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with Ann Lee on June 14, 2004.

The application has been amended as follows:

Claims 5, 6, 10 & 18-32 have been cancelled.

REASONS FOR ALLOWANCE

The following is an examiner's statement of reasons for allowance: the instant claims are allowable over the prior art of record, because the prior art is silent to a method comprising the steps of: patterning a package material into a preform layout; forming a package from a plurality of layers comprising a fuel reservoir interface layer, a layer containing a plurality of resistive heating elements and a microporous flow host structure layer containing a fuel cell.

The prior art, such as Osenar et al., U.S. Pub. 2002/0068212, teaches a membrane fuel cell stack including one or more individual fuel cell cassettes with a manifold opening for passage of reactants through the stack. See the abstract. The reference is silent to a microporous flow host structure layer containing a fuel cell. Therefore, the instant claims are patentably distinct from Osenar.

Conclusion

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
